polylinker; Site_1: Not I; Site_2: ECO RI; The
NIH_BMAP_MOB_N library is a normalized library constructed
from mouse olfactory bulbs. The tag is a string of 5
nucleotides present between the Not I site and the
oligo-dr track. The library was constructed as described
by Bonaldo, Lennon and Soares, Genome Research 6: 791-806
/ 1996. Tissue provided by Ms. Annie Novakovich,
Zivic-Miller Laboratories."

ö the tag7 DNA sequence are used to express recombinant tag7. Tag7 is used to produce and purify antibodies; to inhibit growth of mammalian tumours, to produce and purify antibodies; to inhibit growth of mammalian tumours, prostate, colon/rectum, bladder, testis, stomach, pancaes, mouth, head and neck, squamous cell carcinoma or teratocarcinoma), sarcoma (Kaposi's, osteo or fibro-sarcomas), melanoma or leukaemia; and as a molecular apoptosis. The tag7 polypeptide inhibits tumour growth and induces apoptosis. The tag7 coding sequences are also useful as probes for gene mapping and detection of tag7 gene expression, and as primers. Antibodies against tag7 are used as reagents for detecting tag7; for isolating tag7 and therapeutically to inhibit or delay tumour 61 gtgcccgcagtgagtggagtgccttgccatccgagtgctctagccgcctggggcaccca 120 61 gigccccgcagigagigagggcccigccaiccgagigcictagccgcciggggcaccca 120 180 240 240 300 300 360 420 tgtggggtgtctcgggggcttcctgagatccaactatgaagtcaaaggacaccgggatgtg 480 tgtggggtgtctcgggggcttcctgagatccaactatgaagtcaaaggacaccgggatgtg 480 Gaps 9 9 1 atgitgittgcctgtgctctccttgccctcctgggtctggcaacctcctgcagtttcatc 121 gttcgctacgtggtgatctcacacacagccggcagcttctgcaacagcccggactcctgt gaacagcaggccgcaatgtgcagcattaccacaagaatgagctgggtgcgatgta aagggtgaccacacagggcccatctggaatcccatgtctattggcatcaccttcatgggg aacttcatggaccgggtacccgcaaagcgggccctccgtgctgccctaaatcttctggaa ; 0 Length 549; Indels sequence encodes the murine tag7 of the invention. Murine granulocyte peptide A precursor cDNA.

18-FEB-1998

AAT78510;

BXGXGXB

```
This cDNA sequence encodes the precursor (see AAW23723) of a novel, claimed antimicrobial peptide from bovine neutrophils, designated murine granulocyte peptide A or MGP-A (see AAW23725). It was isolated from murine bone marrow cDNA using primers based on bovine BGP-A cDNA (see AAT78509). The encoded MGP-A precursor comprises signal peptide and propeptide sequences followed by 12 c-terminal amino acids corresponding to mature MGP-A. MGP-A and BGP-A (see AAW23724), exhibit activity against Gram-positive and BGP-A. (see AAW23724), exhibit activity against Gram-positive and BGP-A. (see AAW23724), exhibit activity against Gram-positive and staphylococcus aureus, Escherichia coli, Candida albicans, Salmonella typhimurium and C. neoformans (claimed). They can be used in human or veterinary medicine (particularly to treat disorders associated with lipopolysaccharides, e.g. sepsis and endotoxacamia) or as preservatives in food products or in water supplies (claimed). They can also be applied to crops to reduce the color of t

The present invention describes an antibody that binds to a human protein (I) selected from: PRO1361; PRO1269; PRO1410; PRO1755; PRO1780; PRO3434; PRO1927; PRO1567; PRO1295; PRO1293; PRO1303; PRO4344; PRO4354;

Antibodies specific for PRO polypeptides, used to diagnose and inhibit the growth of tumors in mammals, and to identify inhibitors of PRO

expression

the growth of tumors in polypeptide activity or

Claim 50; Fig 3; 226pp; English.

```
anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells. Increased expression of genes encoding (1) can also be detected to diagnose tumours. Agents which inhibit the activity of (1), especially the antibodies, or an antisense oligonucleotide which phybridises to genes encoding (1), can be used to inhibit tumour growth, preferably by inducing cell death. Methods from the present invention can be used to identify compounds which inhibit the biological activity of (1). AAC58019 to AAC5812 represent PCR primers and hybridisation probes used in examples from the present invention for human PRO sequences. AAC58103 to AAC5812 and AAB24021 to AAB24040 represent human PRO polynucleotide and protein sequences given in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                     44 cetectgeagttteategtgeecegeagtgagtggagggeeetgeeateegagtgeteta 103

transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.

Secreted and transmembrane proteins and nucleic acids designated PRO, useful as hybridization probes, in chromosome and gene mapping and gene
                                                                                                                                                                                       Fong S;
Hillan KJ;
                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                  Desnoyers L, Eaton DL, Ferrara N, owski PJ, Grimaldi CJ, Gurney AL, MAA, Smith V, Stewart TA, Tumas D; PM, Wood WI;

Cells containing the tag7 DNA sequence are used to express recombinant tag7. Tag7 is used to produce and purify antibodies; to inhibit growth of mammalian tumours, especially for treating carcinoma (of liver, ovary, breast, cervix, lung, prostate, colon/rectum, bladder, testis, stomach, pancreas, mouth, head and neck, squamous cell carcinoma or teratocarcinoma), sarcoma (Kaposi's, osteo- or fibro-sarcomas), melanoma or leukaemia; and as a molecular weight marker. The tag7 polypeptide inhibits tumour growth and induces apoptosis. The tag7 coding sequences are also useful as probes for gene mapping and detection of tag7 gene expression, and as primers. Antibodies against tag7 are used as reagents for detecting tag7, as an antagonist of tag7; for isolating tag7 and therapeutically to inhibit or delay tumour

The polynucleotide sequences given in AAA80606-A80623 encode the 12 secreted protein sequences given in AAA85576-B25593. The human secreted proteins have various activities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Secreted protein; immunosuppressant; anti-inflammatory; antiarthritic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acid molecules encoding human secreted proteins are used for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer,
                                                                                                                           343
                                                                                                                                                                                                                                                      403
                                                                                                                                                                                                                                                                                                                                                                                 463
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             523
                                                                                                                                                                                       434

dependent on the tissues in which they are expressed. Examples of the activities of the proteins include: immunosuppressant;
anti-inflammatory; antiarthritic; antirheumatic, dermatological;
antiproliferative; antiarteriosclerotic; anticancer; vulnerary;
cc antiviral; antibacterial; and antiquoists may be used to treat prevent cpolypetides, agonists and antagonists may be used to treat prevent and/or diagnose various disease, disorders and conditions examples of which include: immune disorders e.g. Addison's disease, rheumatoid arthritis, dermatitis, and multiple sclerosis; inflammatory disorders cc e.g. inflammatory bowel disease, Crohn's disease and nephritis; hyperpoliferative disorders such as paraproteinemias and purpura; cardiovascular disorders e.g. coronary arteriosclerosis and mycoarditis; cancer e.g. melanoma and lymphoma. The proteins and polymucleotide sequences may also be used in wound healing and the treatment of infectious diseases. The human secreted protein gene #8 and protein sequences are represented in sequences AAR80613 and AAB25583. Sequences xx
AAA80662-A80663 represent genes related to the secreted protein gene#8.

               expressed by Keratinocytes (PGRP-K), wound healing tissues (PGRP-W) or chondrosarcoma tissue (PGRP-C) are disclosed. The PGRP DNA and proteins are useful for preventing, treating or ameliorating a medical condition in a mammal (claimed). PGRP is useful in augmenting the immune system in such areas as immune recognition, antigen presentation and immune system activation. Antibodies or antagonists directed against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          137 cctgctgcagccccatagtgccccggaacgagtggaaggccctggcatcagagtgcgccc 196

It was isolated from bovine borne marrow cDNA using PCR and RACE procedures. The encoded BGP-A precursor comprises a 21-amino acid signal peptide, a 156-residue propeptide and 13 C-terminal amino

                                                                                                                                                                                                                                                                                          Gaps
acids corresponding to mature BGP-A. BGP-A and the murine homologue, MGP-A (see AAW22725), exhibit activity against foram-logistive bacteria, fungi and viruses, specifically Staphylococcus aureus, Escherichia coli, Candida albicans, Salmonella typhimurium and C. neoformans (claimed). They can be used in human or veterinary medicine (particularly to treat disorders associated with lipopolysaccharides, e.g. sepsis and endotoxaemia) or as preservatives in food products or in water supplies (claimed). They can also be applied to crops to reduce post-harvest spoilage or expressed in transgenic plants to increase their disease resistance. They have low immunogenicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, 5' EST; expressed sequence tag; secreted protein; diagnosis; gene therapy; chromosome mapping; upstream regulatory sequence; forensic; location; development; protein synthesis; stability;

AAX42265 to AAX43075 represent novel 5' expressed sequence tag (EST)
Sequences, corresponding to human secreted proteins. AAX64651 to
AAX40518 represent the EST-related proteins corresponding to AAX42265 to
AAX4052. The 5' ESTS can be used for producing secreted human gene
products. They can be used for producing secreted human gene
credions (UTRS) and upstream regulatory regions which control the
location, development stage, rate, and quantity of protein synthesis, as
well as stability of mRNA. The ESTS are also useful as probes for
chromosome mapping, and to obtain full length cDNA clones. The ESTS can
also be used in forensic procedures to identify individuals, or in
diagnostic procedures to identify individuals, or in
cause therapy protocols. The nucleic acids encoding signal peptides can be
used for directing extracellular secretion of a polypeptide or the
used for directing extracellular secretion of a polypeptide or the
into a cell. The proteins encoded by the EST sequences may be useful in
treating a variety of human conditions. Secreted proteins have
therapy proteins encoded by the EST sequences may be useful in
tho a cell. The proteins encoded by the EST sequences may be useful in
the arealing a variety of human conditions. Secreted proteins have
creating a variety of human conditions. Secreted proteins is
caniance used in the adentification of new secreted proteins is

New granulocyte peptide homolog, zgpal polypeptide, for research applications, diagnosis and treatment of cancer, periodontal, gastrointestinal disease, urinary tract, skin and lung infections

Claim 3; Page 111; 114pp; English.

GP-A) homolog, Zgpal protein. This sequence is a degenerate version of the coding region of SEQ ID NO: 7 shown in AAD4406. Zgpal gene is located on human chromosome 1. Zgpal polypeptides are useful for class of producing antibodies which are useful for detecting cancer. Zgpal proteins are useful for detecting cancer. Zgpal proteins are useful for detecting cancer. Zgpal carles, periodontal disease, thrush, gastrointestinal disease, uninary tract infections, respiratory infections, vaginal infections, with cystic fibrosis and prevention of infection in skin and other ceptihelial wounds. Zgpal-cytokine fusion proteins are useful for enhancing in vivo killing of target tissues (epithelial cancers, and more specifically lung, ovarian and rectal cancers). Zgpal polypeptides, fragments, fusion proteins or agonists are useful in in vitro studies of exogenous microorganism infections such as bacterial, viral or fungal infection and also to study epithelial call defensin induction in cell colluture. Zgpal antibodies, polynuclocides and polypeptides are useful culture. Zgpal antibodies, polynuclocides and polypeptides are useful scruture. Zgpal antibodies, polynuclocides and polypeptides are useful as diagnostics in forensis concers. Zgpal serving as markers for detecting genetic diseases or cancers. Zgpal serving and as antibodies are useful for tagging cells that express zgpal, gene zgpal gene zgpal antibodies are useful for tagging cells that express zgpal, gene zgpal general antibodies are useful for tagging cells that express zgpal, general zgpal ge expression libraries and as neutralizing antibodies or as antagonists to block zgpal activity in vitro and in vivo. Zgpal gene is also useful in This sequence is stated as encoding human truncated granulocyte peptide

This sequence is stated as encoding human truncated granulocyte peptide

(GP-A) homolog, Zgpal protein. This sequence is a degenerate version of
the coding region of SEQ ID NO: 4 shown in AADO4004. Zgpal gene is

CC located on human chromosome 1. Zgpal polypeptides are useful for
Droducing antibodies which are useful for detecting cancer. Zgpal

CC polypeptides having anti-microbial activity are useful for tracating
CC dental carries, periodontal disease, thrush, gastrointestinal disease,
CC utinary tract infections, respiratory infections, vaginal infections,
CC acquired immune deficiency syndrome (AIDS) and lung infections associated
with cystic fibrosis and prevention of infection in skin and other
CC with cystic fibrosis and prevention of infection in skin and other
CC phinelial wounds. Zgpal-cytokine fusion proteins are useful for
CC enhancing in vivo killing of target tissues (epithelial cancers, and
CC more specifically lung, ovarian and rectal cancers). Zgpal polypeptides,
CC fragments, fusion proteins or agonists are useful in in vitro studies of
CC exogenous microorganism infections such as bacterial, viral or fungal
CC infection of zgpal polypeptide, mRNA or anti-zgpal antibodies, thus
CC for detection of zgpal polypeptide, mRNA or anti-zgpal antibodies, thus
CC serving as markers for clone 5' non-coding regions of a zgpal gene. Zgpal
CC antibodies are useful for tagqing cells that express zgpal, for screening
CC antibodies are useful for tagqing cells that express zgpal, for screening
CC antibodies are useful for tagqing cells that express zgpal, for screening
CC antibodies are useful for tagqing cells that express zgpal, for screening
CC antibodies are useful for tagging cells that express zgpal, for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       expression libraries and as neutralizing antibodies or as antagonists to block zgpal activity in vitro and in vivo. New granulocyte peptide homolog, zgpal polypeptide, for research

us-09-462-625-1.rng

```
The present sequence is a cDNA encoding human full length granulocyte peptide (GP-A) homolog, Zgpal protein. Zgpal gene is located on human chromosome 1. Zgpal polypeptides are useful for producing antibodies which are useful for detecting cancer. Zgpal polypeptides having anti-microbial activity are useful for treating dental carries.

The periodontal disease, thrush, gastrointestinal disease, urinary tract infections, respiratory infections, raginal infections, acquired immune deficiency syndrome (AIDS) and lung infections associated with cystic Zgpal-cytokine fusion proteins are useful for enhancing in vioc killing of target tissues (epithelial cancers, and more specifically lung, covarian and rectal cancers). Zgpal polypeptides, fragments, fusion proteins or agonists are useful in in vitro studies of exogenous control of the proteins or agonists are useful in in vitro studies of exogenous control of proteins with a sacterial, viral or fungal infection and also to study epithelial cell defensin induction in cell culture. Zgpal antibodies, polymocleotides and polypeptides are useful for detection of zgpal polypeptide, mRNA or anti-zgpal antibodies, thus serving as markers for detecting genetic diseases or cancers. Zgpal sequences are useful as a diagnostics in forensic DNA profiling and as probes or primers to clone
                                                                                                                                                   Human; granulocyte peptide A; GP-A; Zgpal; cytostatic; antiinflammatory; vulnerary; dermatological; anti-microbial; gastrointestinal disease; pulmonary; dental carries; periodontal disease; gene therapy; AIDS; Acquired Immune Deficiency Syndrome; epithelial wound; cystic fibrosis; infection; urinary tract; respiratory; vaginal; lung; skin; cancer; ovarian; rectal; chromosome 1; ss.

ή
5' non-coding regions of a zgpal gene. Zgpal antibodies are useful for tagging cells that express zgpal, for screening expression libraries and as neutralizing antibodies or as antagonists to block zgpal activity in vitro and in vivo. Zgpal gene is also useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; granulocyte peptide A; GP-A; Zgpal; cytostatic; antiinflammatory; vulnerary; dermatological; anti-microbial; gastrointestinal disease; pulmonary; dental carries; periodontal disease; gene therapy; AIDS; Acquired Immune Deficiency Syndrome; epithelial wound; cystic fibrosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1020 gctggtgggccacagtgatgtggcccgaaccttgtctcctgggcaggctttgtacaacat 1079

c peptide (GP-A) homolog, gapal protein. Zapal gene is located on human chromosome 1. Zapal protein. Zapal gene is located on human chromosome 1. Zapal polypeptides are useful for producing antibodies chromosome 1. Zapal polypeptides having chromosome 1. Zapal polypeptides having chromosome 1. Zapal polypeptides having anti-microbial activity are useful for treating dental carries.

Competions, respiratory infections, vaginal infections, acquired immune deficiency syndrome (AIDS) and lung infections associated with cystic fibrosis and prevention of infection in skin and other epithelial wounds. Competitions are useful for enhancing in vivo killing of target tissues (epithelial cancers, and more specifically lung, ovarian and rectal cancers). Zapal polypeptides, fragments, fusion proteins are useful in in vitro studies of exogenous microorganism infections such as bacterial, viral or fungal infection and also to study epithelial cell defensin induction in cell culture. Zapal antibodies, polymelectides and polypeptides are useful for detection of antibodies, polymelectides and polypeptides are useful for detection of cappal polypeptide, mRNA or anti-zapal antibodies, thus serving as markers for detecting genetic diseases or cancers. Zapal sequences are useful for cappal appropriates are useful for cappal antibodies are useful for cappal, for screening expression libraries and as neutralizing antibodies or as antagonists to block zapal activity in vitro and in vivo. Zapal gene is also useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ĥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     tattggcatcaccttcatggggaacttcatggaccgggtacccgcaaagcgggccctccg 398

Novel human peptidoglycan recognition protein-like proteins (PGRP) expressed by keratinocytes (PGRP-K), wound healing tissues (PGRP-W) or chondrosarcoma tissue (PGRP-W) are discused. The PGRP DNA and proteins are useful for preventing, treating or ameliorating a medical condition in ammmal (claimed). PGRP is useful in augmenting the immune system in such areas as immune recognition, antigen presentation and immune system activation. Antibodies or antegonists directed against these proteins may be useful in reducing or eliminating disorders such as sendotoxic shock and autoimnume disorders and for treating infectious diseases including silicosis, sarcoidosis and idiopathic
                                                                                                                                                                                                                                                                                                                                                                                                     Wound healing tissue peptidoglycan recognition protein-like protein cDNA.

-1 TISSUE SPECIFICITY: STRONGLY EXPRESSED IN SPLEEN AND LUNG. ALSO DETECTED IN BRAIN AND THYMUS. IN THE LUNG, EXPRESSED IN THE PORKINJE CELLS INTRAALVEOLAR SPACE, IN THE BRAIN, EXPRESSED IN THE PORKINJE CELLS OF THE CEREBELLUM AND IN CERTAIN LAYERS OF NEURONS IN THE HIPPEOCAMPUS. ALSO DETECTED IN CELLS FILLING THE SPACE WITHIN THE INTESTINAL VILLUS.

-1 SIMILARITY: BELONGS TO THE PEPTIDOGLYCAN RECOGNITION PROTEIN
                                                                                                                                               Kang D., Liu G., Lundstroem A., Gelius E., Steiner H.;
